

Research Opportunity in the Targoff Lab

A technician position is available in the **Targoff Lab**, Department of Pediatrics and Columbia Stem Cell Initiative, at Columbia University Medical Center in New York City, starting in October 2023.

The primary focus of the Targoff Lab is to investigate the molecular and cellular mechanisms underlying cardiovascular development and regeneration. We accomplish these goals through the use of zebrafish as a model system and expand our studies into the fields of transcriptional regulation, cardiac mechanobiology, and stem cell biology. We utilize an innovative combination of genetic, live-imaging, single cell genomic, and transgenic approaches.

Outstanding and highly motivated candidates with backgrounds in biology, genetics, or biomedical engineering should apply to Dr. Kimara L. Targoff (kl284@columbia.edu) with a cover letter and curriculum vitae included.
